

Information Security Statement

John Paul Construction is a long-established building construction and civil engineering company providing construction services for new build, refurbishment and fit out projects.

The company is focused on continually delivering excellence across all our operations, including the processing of data, with the objective of delivering the highest level of Client satisfaction. Our aim is to be a leader in implementing best practice within our business.

We have developed an Information Security Management System (ISMS) to meet the requirements of the ISO27001:2022 and gain certification

The key objectives of the ISMS are to:

- Ensure compliance with our regulatory obligations through the implementation of best practices.
- Ensure confidentiality, integrity and availability are maintained with our systems and data.
- Describe the security principles and explain how they shall be implemented in the company.
- Introduce a consistent approach to security to ensure that all staff members fully understand their responsibilities.
- Create and maintain awareness of the need for information security as an integral part of day-to-day business.
- To drive down information risk to acceptable levels.
- To uphold our staff and clients' information rights.
- To protect the reputation of the company, our clients and stakeholder relationships.

The full suite of policies and procedures of the ISMS can be found in the Quality manual.
